

Sunless Tanning Guidelines & Recommendations

24 Hrs before Your Sunless Tanning Session

EXFOLIATE before each session to remove dry, flakey skin. This allows the spray to absorb deeply into the skin & oxidize to a brilliant golden brown color. Spraying sunless products on dry flakey skin causes the tan to look less natural and fade unevenly, shortening the life of the sunless tan. Avoid using off the shelf bar soaps, high pH shower products or in-shower moisturizers. These products can halt the DHA bronzing reaction or cause the dreaded "orange" effect. Any waxing should be done no less than two days prior to your tanning session.

The Day of Your Sunless Tanning Session

DO NOT APPLY lotions, moisturizers, perfumes, deodorant or makeup prior to your tanning session. Wear dark, loose fitting clothing and remove jewelry. Tight clothes have a tendency to rub off or smear the bronzers.

Maintenance After Your Tanning Session

Avoid any activity that will cause you to sweat and possibly cause streaking of the bronzers. Also avoid water for at least four hours or you will stop the tanning action of the DHA and/or cause streaking. Avoid chemically treated swimming pools or spas for at least 24 hours! Wait to shower at least four hours and then bathe with plain water only for the first 16 hours after your session to avoid fading and stripping of bronzers.
